Prathamesh Patil

Full Stack Engineer | Node.js · TypeScript · React · MySQL

Bengaluru | +91 73490 41840 | prish.tmesh@gmail.com | prathameshpatil.vercel.app | github.com/Prathameshh-Patil | LinkedIn

Summary

Full stack engineer (B.E., Oct 2026) with 11 months of internship experience. I build typed products end to end: React/Next.js interfaces, Node.js and FastAPI REST APIs, indexed MySQL and PostgreSQL schemas, and Docker, CI/CD and AWS deployments.

Experience

AI & Cloud Computing Intern, SuprMentr Technology Pvt Ltd — Nov 2025 – Mar 2026

- Wrote SQL (window functions, CTEs) over PostgreSQL for weekly usage analytics shown in React dashboards.
- Worked on a multi-agent RAG platform built with LangGraph, including a self-evaluation step that tracks hallucination rate and answer accuracy.

Software Engineer Intern, AI Division, Jmedia Corp — Jan 2025 – Jun 2025

- Built FastAPI REST APIs serving LLM-backed features, secured with JWT authentication and rate limiting.
- Containerized services with Docker, automated build and deployment with GitHub Actions CI/CD, and monitored latency and error rates on Grafana dashboards.

Projects

Portfolio Platform: Website, REST API & Admin Panel — Live | GitHub

TypeScript, Node.js, Express, MySQL 8.4, Drizzle ORM, Zod, Next.js, Docker, AWS Lambda + RDS, GitHub Actions

- Built a TypeScript monorepo: a Next.js site and admin panel over an Express + MySQL REST API (routes, services, repositories), with shared Zod contracts so the frontend and API fail to compile if they disagree.
- Documented the API with OpenAPI 3.1 and Swagger UI generated from the Zod schemas the routes validate with, so docs cannot drift; an integration test checks real responses against the spec.
- Designed composite MySQL indexes for each hot query and verified plans with EXPLAIN: on 200,000 rows, paginated inbox queries dropped from 26.6–35 ms to 0.23–0.26 ms (100–150× faster).
- Deployed the API on AWS Lambda + API Gateway with RDS MySQL (TLS, Secrets Manager) from one SAM template; CI runs 33 API tests against a real MySQL container and 13 Playwright end-to-end tests on every push.

Slotwise: Event Booking Platform — Live | GitHub

Next.js, TypeScript, FastAPI, PostgreSQL, SQLAlchemy, Celery, Redis, Docker

- Built a full-stack seat booking app with 10-minute holds, all-or-nothing multi-seat orders, booking history and an admin view.
- Prevented double booking with a partial unique index and single-transaction orders in PostgreSQL; a 12-thread race test asserts exactly one request wins a seat, and fails when the index is removed.
- Moved confirmation emails and hold expiry off the request path into Celery + Redis background jobs with retries.

ReplyDesk: AI Support Inbox with Human Approval — Live | GitHub

Next.js, TypeScript, FastAPI, PostgreSQL, LLM API, Playwright

- Built a staff inbox where four LLM agents sort, extract, draft and check replies and a person approves each one; agent output is schema-validated, and failures go to a manual queue.
- Raised category accuracy from 90% to 97% via an eval over 60 labelled messages; 84 API tests on PostgreSQL.

MindMorph: Doodle-to-Creature Web App — Live | GitHub

React, Node.js, Express, PostgreSQL, Gemini API

- Built a React canvas app with an Express API that reads doodles via Gemini Vision, generates art and saves it to PostgreSQL.

Skills

Languages	TypeScript, JavaScript, Python, SQL
Backend	Node.js, Express, FastAPI, REST API design, OpenAPI/Swagger, JWT authentication, Zod, Celery
Databases	MySQL, PostgreSQL, Redis, Drizzle ORM, SQLAlchemy, query optimization, transactions
Frontend	React, Next.js, Tailwind CSS
Cloud & DevOps	AWS (Lambda, API Gateway, RDS, SAM), Docker, GitHub Actions CI/CD, Vercel, Grafana, Git
Testing	Vitest, Supertest, pytest, Playwright

Education

B.E., Artificial Intelligence & Machine Learning — 2022 – 2026

Dayananda Sagar Academy of Technology and Management, Bengaluru — CGPA 7.6
